KEY NOTES

- (1) LIVING ALLEY Paving is scaled down for pedestrian shared use; utilities are undergrounded; planting and trees throughout.
- (2) RIDESHARE ZONE WITH SHADED SEATING Trellis structure with bench seating. There is space (5) BULB OUT for roughly 3 vehicles to temporarily pull over to drop

 Traffic calming mechanism to protect pedestrians. off and pick up riders.
- (3) CORNER SIGNAGE Low granite wall provides a cornerstone to the Shasta Street/First Street corner for a sense of opening and welcome. The corner provides a place for signage. Visual obstructions are avoided in these areas; landscape elements are kept at a low height so as not to obstruct driver and pedestrian sight
- 4 IMPROVED CROSSWALK
- Striped crosswalks with detectable warnings located in three locations (Shasta Street crossing, 1st Street crossing at existing crosswalk location, and Plaza 7 drive aisle crossing).
- (6) FIRST STREET PUBLIC WALKWAY A clearly delineated public walkway is consistently paved for wayfinding. The walkway is lined with trees and plantings on both sides given substantial setbacks from the building frontage.
 - **7** BIKE PARKING CLASS II Class II bicycle parking spaces as defined by the VTA Bicycle Technical Guidelines are located near building and plaza entrances. The number of spaces

VTA Bicycle Technical Guidelines.

exceeds estimated recommendations based on the

- 8 LOW WALL
- 16 to 24-inch high walls along First Street provide wayfinding and pedestrian protection from the street. Low walls also provide seating opportunities and articulate scaled-down spaces along First Street while discouraging unsafe drop-offs.
- 9 FIRST STREET LANDSCAPE BUFFER WITH TREE CANOPY Landscape buffers along First Street separate
- pedestrians from vehicles. Plantings consist of drought-resistant species and trees. (10) DECORATIVE PAVING FOR WAYFINDING Special paving creates inviting entries and

different programs.

A public bike repair station is located near the main entrance of the public plaza near First Street, adjacent to bicycle parking. The station houses tools for basic bike repairs and maintenance for changing bicycle tires, adjusting brakes, etc. The tools are emphasizes openings. Different paving types lead to secured with tamper-proof equipment.

(13) TRELLIS ENTRY

nature of the alley.

(12) BIKE REPAIR STATION

(11) TRELLIS ENTRY WITH SEATING

The trellis provides a vertical wayfinding element

and sense of opening to the public plaza while

offering pedestrians and users a place to sit and

gather. Seating is proposed here and throughout

The smaller trellis provides a vertical wayfinding

element and is scaled with respect to the residential

- (14) PUBLIC GARAGE ENTRY + ELEVATORS Special paving is used to signal pedestrians to the public garage entry and elevators. The access point is open and adjacent to the cafe for visibility and the site to meet multiple user needs, using durable,
- quality-crafted, and natural materials such as wood, (15) BIKE PARKING CLASS I Located on Level B1 adjacent to the main lobby elevators, 24 wall-mounted vertical bike storage spaces are provided for building use. A shower room is also available in the building for office bicycle commuters.
