Project Traffic Impact Analysis (TIA) - Response to Comment

Dear Mr. Miller,

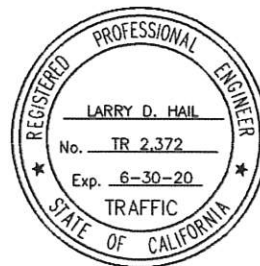

The following is provided in response to a recent comment from City staff. The comment suggest the roadway descriptions in the Project TIA should be revised to reflect the Caltrans Road System (CRS) Map. The roadway classification descriptions in the Project TIA were referenced the City's General Plan Circulation Element (copy of Fig. C-1 is attached). Foothill Expressway is an Expressway within the study area and El Monte Avenue is classified as an Arterial between I-280 & Foothill Expressway. Main Street is a designated collector street east of Foothill Expressway. Burke Road, University Avenue, Lincoln Avenue, Orange Avenue and Sherman Street are local residential collector streets.

A roadways Functional Classification (FC) on the CRS Map is primarily provided for determining Federal-Aid funding eligibility purposes, not operational analysis purposes. The local street network in the vicinity of the project site is comprised of roadways under the jurisdiction of the City of Los Altos and Santa Clara County, not Caltrans. Revising the roadway descriptions in the Project TIA per the CRS Map would not affect or change the analysis or conclusions.
