

DATE: January 13, 2020 AGENDA ITEM #2

**TO**: Environmental Commission

FROM: Callie Niday, Staff Liaison

SUBJECT: Environmental Commission Work Plan

### **RECOMMENDATION:**

Review and take action, as appropriate, on the 2019/20 Environmental Commission Work Plan

### BACKGROUND

The Environmental Commission met in a Joint Meeting with the City Council on May 7, 2019 to review the Commission's 2018/19 Accomplishments and Draft 2019/20 Target areas and discussed issues and projects for the upcoming year. Based on this discussion, the targets were finalized, and the 2019/20 Work Plan was developed. The Targets and Work Plan are intended to focus the Commission's agenda items and will serve as a roadmap for projects and actions, as appropriate, during the 2019/20 year.

### DISCUSSION

Environmental Commission Targets and resulting Work Plan for 2019/20 are:

- 1. Climate Action Plan
- 2. Water Conservation and Stormwater Management
- 3. Solid Waste Diversion
- 4. Community Outreach and Education

The Commission will review the targets, projects, and status updates at each of its monthly meetings and act appropriately.

The following Environmental Commission report on single use plastics is provided in response to the Council's October 22, 2019 Potential Future Agenda Items discussion on this topic.

Over the past several months, the Environmental Commission's activities on Single Use Plastics Reduction has included

- Monitoring state-wide legislation and developments
- Monitoring neighboring community legislation and activities
- Participating in the County Waste Reduction Commission's Ad Hoc Model Ordinance Committee

The 2019 CA State Legislature closed without a vote on SB 54 Solid Waste: Packaging and Products that was proposed to address many issues related to single use plastics. State Senator Jerry Hill believes this bill will be brought forward for discussion and a vote early in the 2020 Legislature session. In addition, an application for a State Ballot Initiative on single use plastics has been filed with the CA Attorney General. The Initiative contains restrictions in addition to those proposed in SB 54 and, if it qualifies, would appear on the November 2020 CA Election Ballot.

Berkeley, Palo Alto and San Francisco have implemented some of the most comprehensive local ordinances. Most Cities in Santa Clara County as well as the County are participating in the County Waste Reduction Commission's Ad Hoc Model Ordinance Committee.

Los Altos Associate Civil Engineer, Andrea Trese, and Environmental Commissioner, Don Weiden, have been participating in the County Waste Reduction Commission's Ad Hoc Model Ordinance Committee meetings. The Committee is led by Lori Topley of the City of Mountain View. The Committee last met on December 10, 2019 to review and discuss the first draft of a model ordinance. A second draft of the model ordinance is now being developed for further review and discussion.

Following finalization of the County Waste Reduction Commission's Ad Hoc Model Ordinance Committee's Model Ordinance, we anticipate actions and activities for Los Altos City Staff and the Environmental Commission will include the following (each dependent upon agreement to continue from the preceding activities)

- The new City Sustainability Coordinator establishes the work priority of this issue
- Review of the Model Ordinance by City Staff and the Environmental Commission
- Draft concepts for a Los Altos Ordinance based on the Model Ordinance
- Outreach to impacted business and public leaders
- Draft a Los Altos Ordinance
- Present Ordinance for City Council consideration

Don Weiden

# **SVCE Frequently Asked Questions**

Does PG&E have enough transmission capacity for the expected increase in electricity demand?

This answer has two parts – in general and then specific to a project location.

Generally speaking, yes, PG&E has enough transmission capacity. New construction accounts for a very small fraction of overall electricity usage and occurs gradually, enabling PG&E time to accommodate.

At the site level, all projects are reviewed for impact on the local transformers and lines. This will continue. PG&E has been a participant in the reach code effort since the beginning and sent letters of support to all cities considering a reach code.

# Does SVCE have enough generation capacity for the expected increase in electricity demand?

SVCE regularly reviews customer load compared to our energy contracts. We began funding the development of new renewable resources starting in 2017 and continue to do so for this very reason.

# What might be the positive or negative impact on a residential electricity bill for an all-electric home?

Using the same construction budget, all-electric homes provide similar or lower utility bills than comparable homes using gas.

### What type of energy is on the grid?

SVCE is responsible for the electricity purchases for its territory. All sources are carbonfree. Load growth will also be met with carbon-free sources.

Other buyers in the energy market purchase coal or natural gas to meet their regional needs. As renewables have increased, fossil fuel usage has decreased. Over the last 10 years, natural gas is down from 45% to 35% today. Coal is down from 18% to just 3%. Renewables have increased from 11% to 31% over that same period. All load serving entities have a choice in what they buy.

https://ww2.energy.ca.gov/almanac/electricity data/total system pow er.html.

### Doesn't renewable energy cost more?

This certainly was true a decade ago. However, the cost of new generation coming from carbon-free sources is competitive to and often <u>less costly than new natural</u> <u>gas power plants</u>.

### Isn't gas still used when the sun goes down?

More correctly, something other than solar must be used when the sun goes down. This can be met by hydro, wind, natural gas peakers, and now by large scale battery storage often recharged by solar as SVCE has done.

### Oakland to swap jet fueled peaker plant for urban battery

### <u>SV Clean Energy Signs major contracts for California's largest solar-plus-</u> <u>storage projects</u>

### Is gas more resilient?

PG&E is also required to shut down gas service during fires and/or earthquakes. Gas service was shutoff for tens of thousands during <u>Camp</u> and <u>Kincaid</u> Fires, some for over 10 days.

For new buildings with gas appliances, having gas service does not improve resiliency as new gas appliances require electricity for ignition and motors to function. This includes tankless water heaters, furnaces, gas dryers, gas ranges (especially with digital controls). Resilience is best handled with battery storage, propane (long storage life) generators or both.

### Aren't fuel cells twice as efficient as natural gas power plants?

True but somewhat misleading. If all electricity were produced in this fashion, emissions within PG&E territory would actually rise compared to their <u>current power</u> <u>mix</u>, not reduce. Even PG&E purchases most of their electricity (about 85%) from sources currently cleaner than this method. Compared to what SVCE purchases, the increased GHG from using natural gas this way would be dramatically worse, as <u>all</u> <u>SVCE sources</u> are cleaner. Any use of this technology in PG&E territory would rapidly move emissions in the wrong direction.

### Do gas appliances affect my health?

Burning gas releases multiple harmful byproducts, including carbon monoxide and formaldehyde. "Additionally, <u>cooking emissions</u>, especially from gas stoves, have been associated with increased respiratory disease. Young children, people with

asthma, and people with heart or lung disease are especially vulnerable to the toxic effects of combustion pollutants." – <u>California Air Resources Board</u>
