

FEATURED ART PIECE -- ROLL OVER WHIP

RIDING THE RIBBON

Inspired by our recent Gatorade benches, this piece has a steel-edged launch. Great for the top of a stair set, the Roll Over Whip grinds and slides like a bench but seamlessly integrates to the flat, letting even beginning skaters use the piece.

EARTHQUAKE GAP

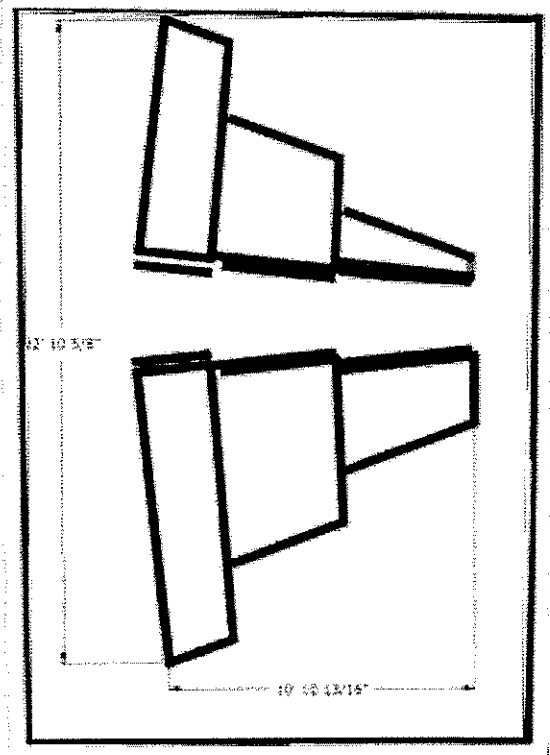

Tallest Point = 4' 3"

THE EARTHQUAKE SERIES

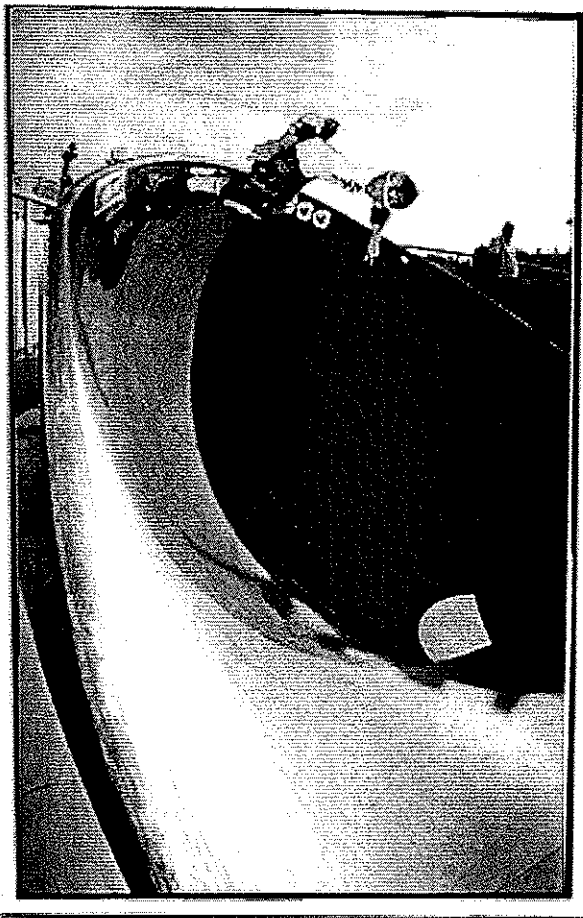

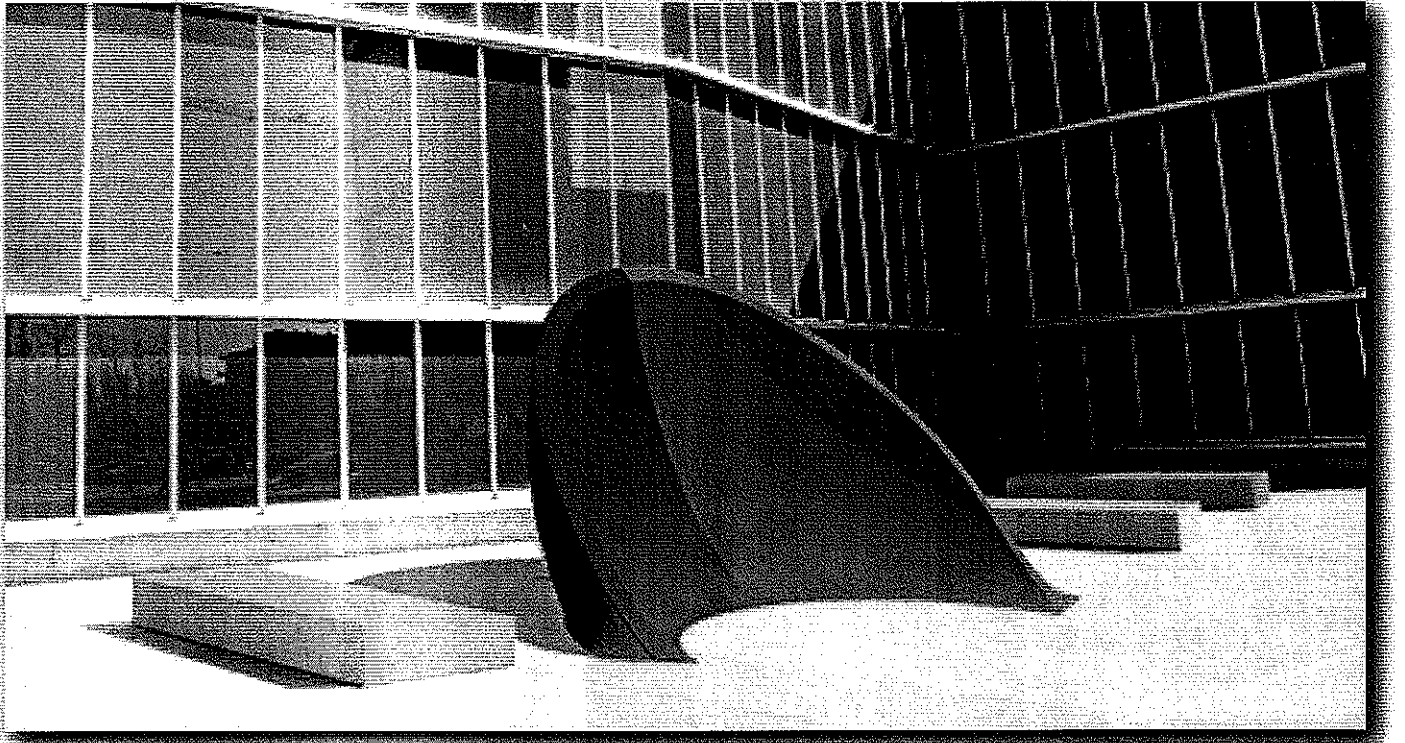

The Earthquake Series is a series of sculptures for an outdoor architectural site. Each piece is a solid, dark, angular form that is designed to be a permanent fixture in the landscape.

Although the sculptures are made of dark, heavy materials, they are designed to be a permanent fixture in the landscape.

By using the same materials and techniques, the artist has created a series of sculptures that are both functional and artistic.

STREET CLAM

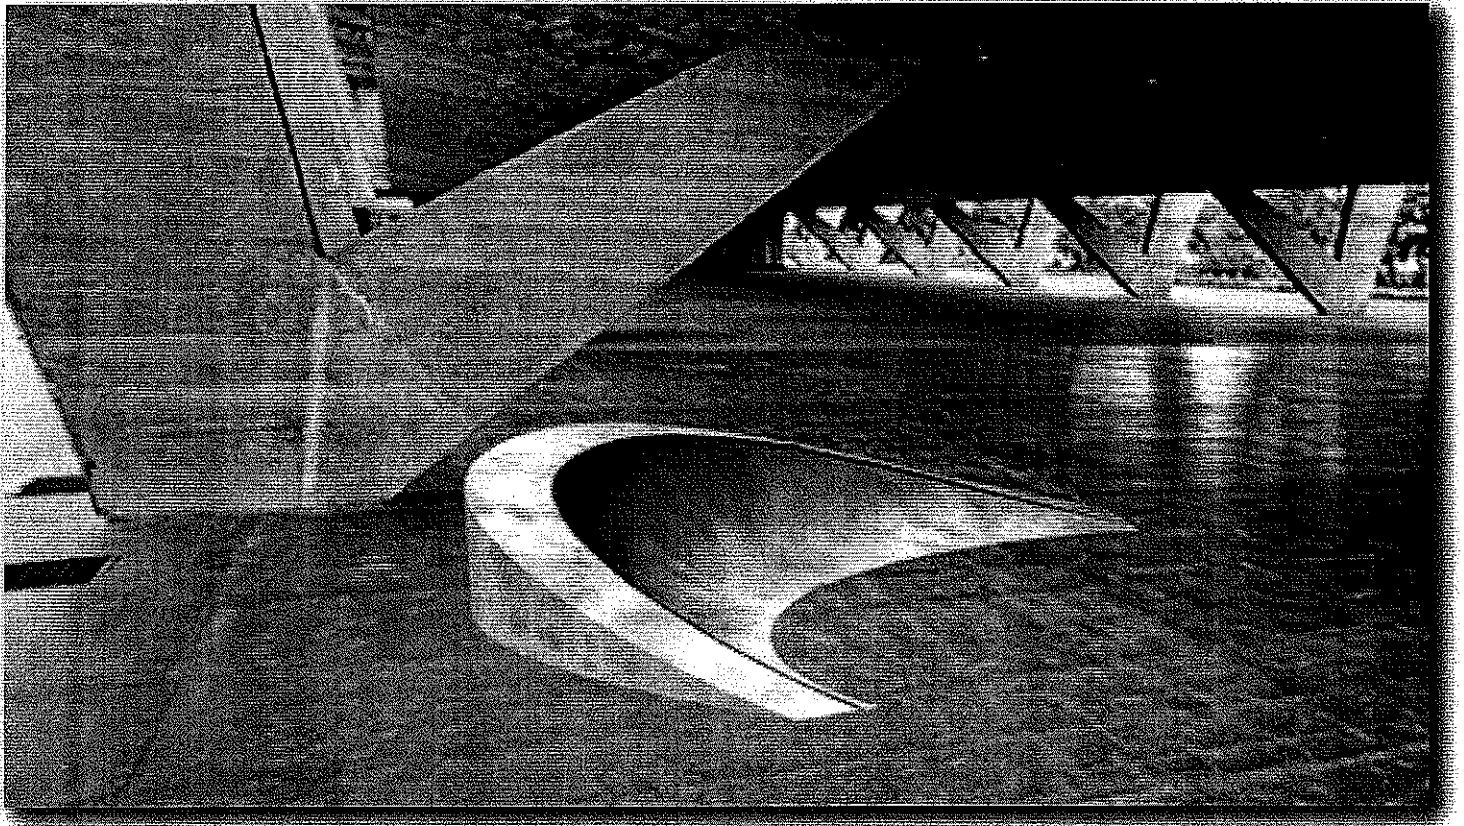

FROM THE BOWL TO THE STREET

A favorite among transition skaters, the clam shell is a premium feature in bowls across the world.

This piece brings the same tight transition to the street, great for corner pieces.

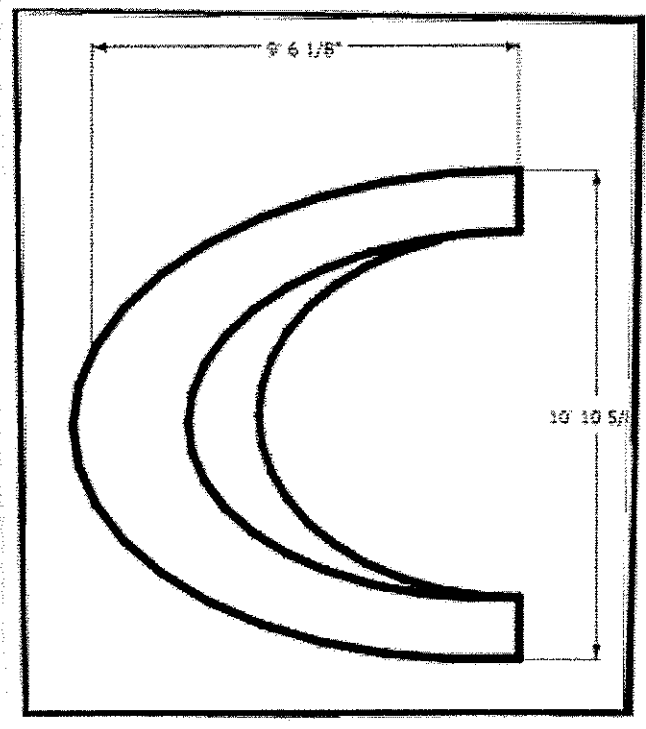

HORSESHOE

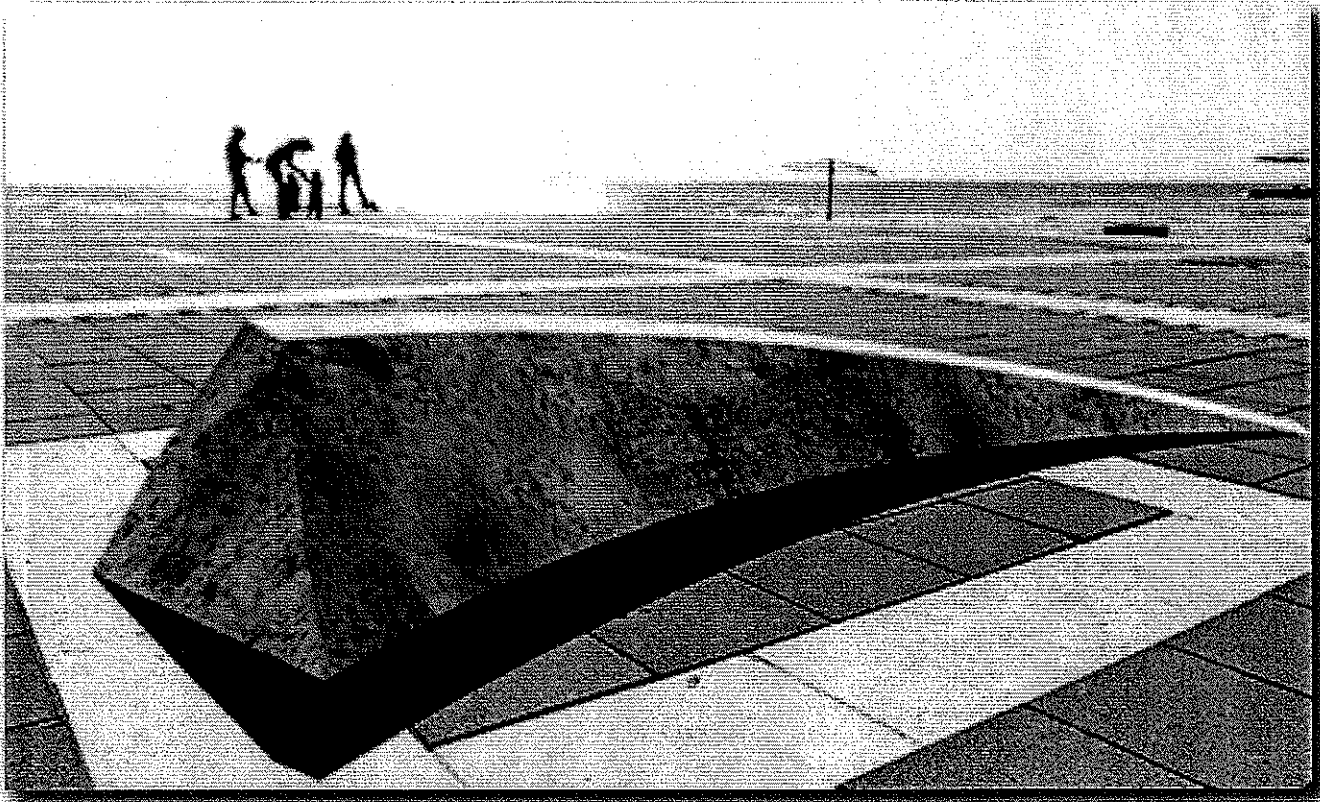

Tallest Point = 2'

A SWEEPING LEDGE

A dramatic piece that curves, takes and ramps, the Horseshoe serves as a great corner piece for any skatepark or skate spot.

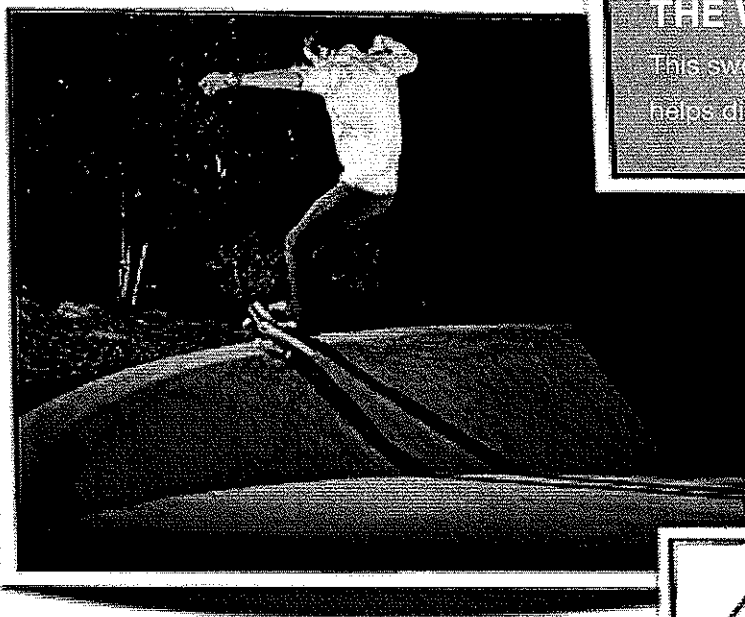

DRAGON TAIL

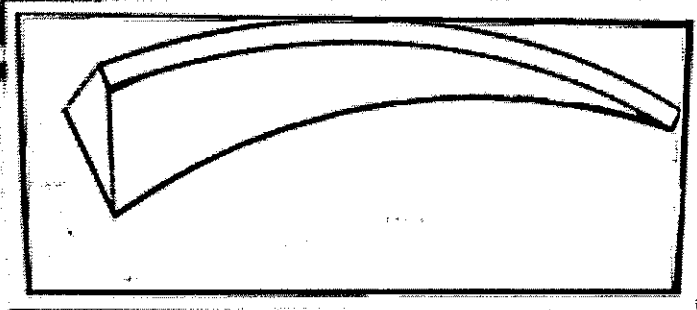

THE COOLEST RETAINING WALL IN THE WORLD

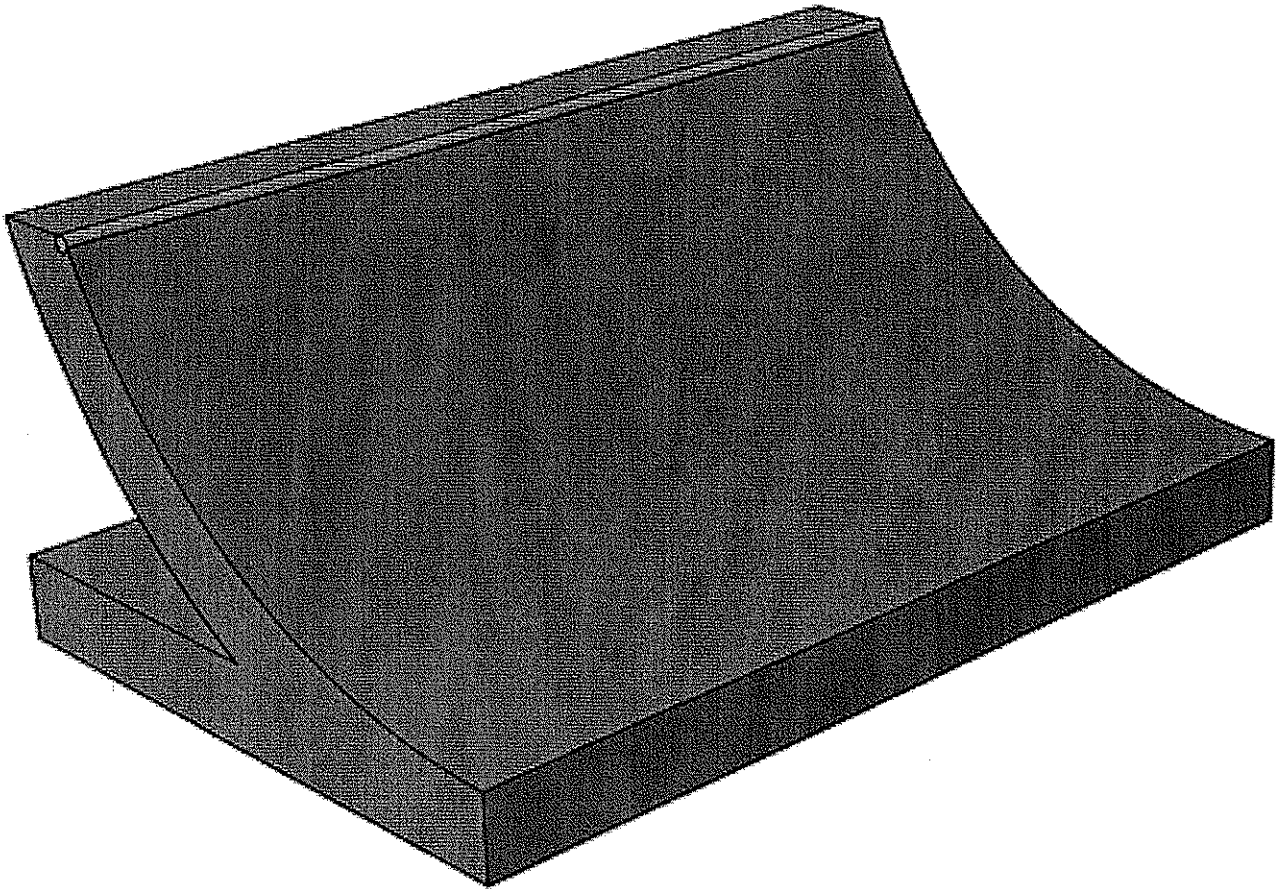

This swooping raked wall serves as a bank and also helps direct traffic flow at skateparks and skate spots.

Tallest Point = 2' 5"

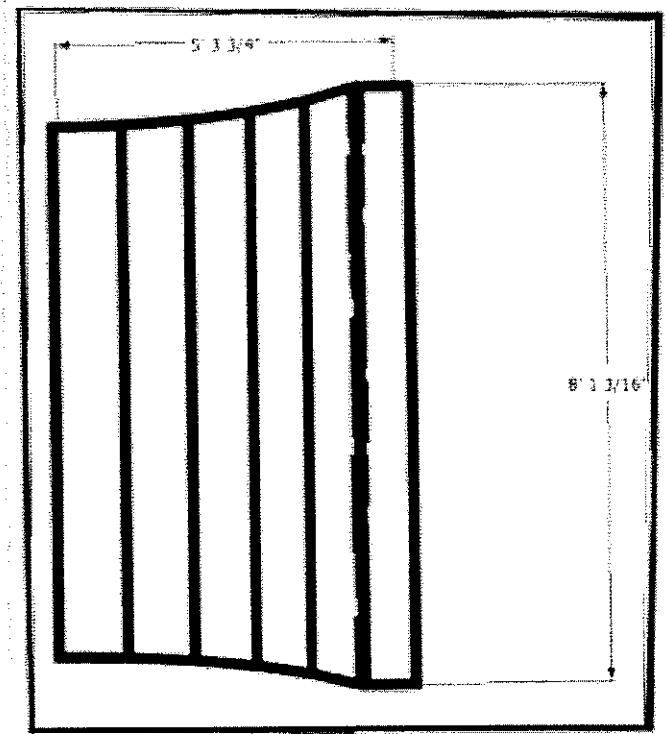

FLOATING QUARTER-PIPE

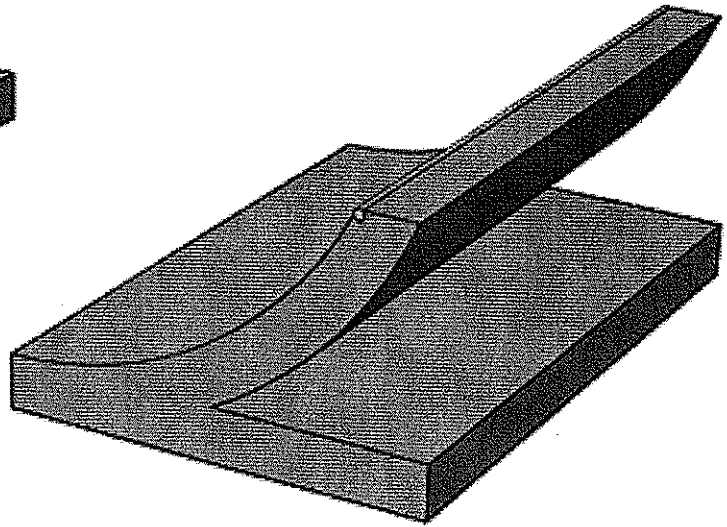

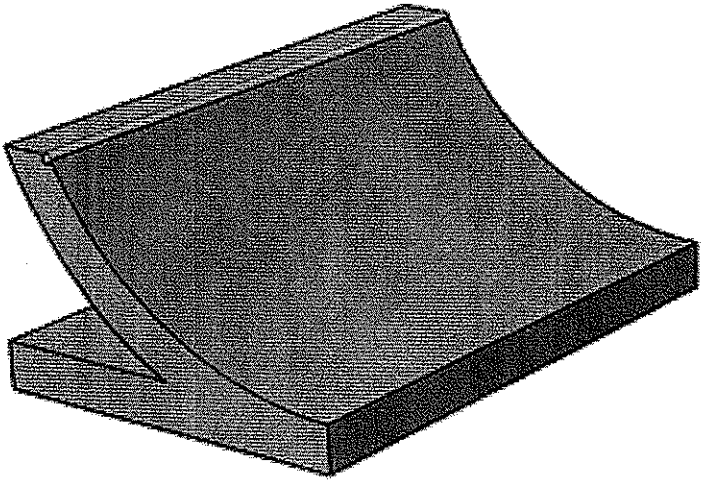

Tallest Point = 3' 5"

A FRESH TAKE ON A SKATEPARK CLASSIC
The quarter-pipe is the foundation of the modern skatepark. This version reduces the piece to its essence - the riding surface.

FLOATING HALF-PIPE

Tallest Point = 4'

THE BEST PART OF THE MINI-RAMP

Visually stunning and fun to skate, the floating mini-ramp requires minimal site footprint compared to a traditional half pipe.
