# Introduction

Working Paper #1, Existing Conditions and Assessment Report, provides an overview of current conditions that affect walking in Los Altos, including:

- Policies and plans
- Land use
- Demographics
- Transit
- Pedestrian infrastructure (walkways, paths, curb ramps signals, crosswalks)
- ADA-related infrastructure
- Collisions
- Education, encouragement, enforcement programs

In addition to assessing current conditions, this working paper contains draft Vision, Goals, and Policies that are suggested to guide the development of the Pedestrian Master Plan recommendations.

The purpose of this working paper is to provide a common understanding of current conditions, opportunities, and constraints to improving the walking conditions in the City of Los Altos. After review and comments from the City, the Bicycle and Pedestrian Advisory Committee, the Parks and Recreation and Senior Commissions, and members of the public, this working paper will be refined, and will make up the first section of the City's Pedestrian Master Plan. Specific recommendations for infrastructure and policy modifications will be covered in future working papers.
